No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention is further useful for monitoring the efficacy of a therapeutic treatment of a cancer (prostate cancer, ovarian cancer, lung cancer, breast cancer). The molecules of the invention are useful diagnostically or prognostically to detect diseases or conditions associated with altered PRC17 activity or expression relative to normal, for example cancer. The present nucleic acid sequence represents the human PRC17 gene located on chromosome 17q11-12. This sequence encodes the human PRC17 protein of the invention

                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NF-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nuclear factor kappa B; NF-kappaB; inflammation; autoimmune dise cancer; infectious disease; bone disease; AIDS; neurodegenerative disease; ischaemic disorder; Antiinflammatory; Immunomodulator; Cytostatic; Antimicrobial; Osteopathic; Anti-HI Neuroprotective; Nootropic; Cardiant; Gene therapy; human; gene;

New purified protein that activates nuclear factor kappa
useful for treating inflammation, autoimmune diseases, of
infectious diseases, bone diseases, AIDS, neurodegeneral
ischemic disorders.
                                                                                                                                                                                                                                                                                                                                                                    2002JP-00291302.

                                                                                                                                 а в (NF-kappaв),
```

The present invention relates to novel proteins and the sequences (ADC37168-ADC37455), which activate nuclear factions appears. The proteins and their coding sequences are use a disease associated with NF-kappaB activation, such as autoimmune diseases, cancers, infectious diseases, bone neurodegenerative diseases, or ischaemic disorders. leir coding
factor kappa B (NFseful for treating
s inflammation,
le diseases, AIDS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                       This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence encodes a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids having the different human tissues,

                                                                                            В
                                                                                                                                                                                                                                  The present invention describes an isolated tumour-associated antigenic (carget (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% region of (c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector comprising the above comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by any of the above nucleotide sequences; (c) a received the above polypeptide; (d) an isolated polypeptide; (f) an isolated of a nisolated antibody that binds to the above polypeptide; (f) a process (comprising the above polypeptide timed to a heterologous polypeptide; (f) an isolated oligopeptide, (f) a process (for producing the antibody; (f) an isolated oligopeptide, (f) a process (for producing the antibody; (f) an isolated oligopeptide, (f) a process (for producing organic molecule that binds to the above polypeptide; (f) a composition of matter comprising organic molecule that binds to the above polypeptide; (f) a composition of matter contained within the container; (l1) an econdoc of the composition of matter contained within the container; (l2) methods of the protein of the above protein; (l2) methods of the protein of the above protein; (l3) a method of determining the protein of a cell that expresses the above protein where the protein and method of of a cell that expresses the above protein and method of described above; (l5) methods of disgnosing the protein and method of organic molecule to a cell that expresses of a method of determining the protein and method of organic molecule to a cell that expresses of a method of organic molecule to a cell that expresses of a method of organic molecule to a cell that expresses of a c
                                                                                                                        ঠ

nucleic acid molecule and encoded polypeptide, in venting or treating cell proliferative disorders

1; SEQ ID NO 3468; 5504pp; English.

The present invention describes an isolated tumour-associated antigenic (C target (PAT) nucleic acid comprising; (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that has 80% (c). Also described; (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide (c) an isolated polypeptide (c) an isolated polypeptide (c) an isolated polypeptide; (4) an amino acid sequence encoded by the full-comprising the above polypeptide; (6) an isolated antibody that binds to the above polypeptide; (6) an isolated antibody; (8) an isolated antibody process (b) and isolated antibody; (1) a process (c) antibody, oligopeptide; (9) a tumour-associated antigenic target (TAT) (c) binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of the growth of a cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth the growth of a cell that expresses the above protein; (13) a method of ammmal having a cancerous tumour comprising cells that expresses the above protein; (13) a method of a tumour in a mammal; (16) a method so f diagnosing the presence of a tumour in a mammal part of the protein and cell that expresses the protein genit the protein of a cell that expresses the protein described above. The that increased expression or activity of the above containing the protein above protein and method of acell that expresses the protein described above. The composition and method are useful for diagnosting.

The composition of a cell that expresses the protein described above. The containin therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a human TAT cDNA sequence from the present invention.

The polypeptides and polynucleotides can be used for the diagnosis, treatment and prevention of cell proliferative, immunological and reproductive disorders. Disorders associated with decreased expression or activity of include arteriosclerosis, cirrhosis, hepatitis, psoriasis, melanoma, lymphoma and cancers of the breast, brain and prostate, acquired immune deficiency syndrome (AIDS), allergies, anaemia, asthma, diabetes mellitus, osteoarthritis, endometriosis, uterine fibroids and disruptions of the menstrual cycle. Antibodies against PROAP can be use in diagnosis of disorders characterized by PROAP e.g. in ELISA (enzyme linked immunosorbent assays) and the polynucleotides may be used to detect and quantify gene expression in biopsied tissues. These techniques can also be used to monitor regulation of PROAP levels during therapeutic intervention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 200

SXCCCCCCCCCCXSX7777XXX
                   related protein (PROAP) and its encoding nucleic acid. The invention is useful for diagnosing, preventing or treating disorders associated with altered expression or activity of human PROAP, such as cell proliferative (e.g. cancer or atherosclerosis), immunological (e.g. acquired immunodeficiency syndrome (AIDS) or allergies) or reproductive (e.g. infertility) disorders. The invention is also be used in screening for drugs that may be used for treating or preventing the disorders mentioned above and in gene therapy. The present sequence is the human PROAP-12 protein encoding cDNA.
                                                                                                                                                                                                                                                                                     New human proliferation and apoptosis related proteins and polynucleotides for diagnosing, preventing or treating disorders associated with aberrant protein expression, e.g. cancer, AIDS, atherosclerosis or infertility.
                                                                                                                                                                                                                                                    Claim

                                                                                                                                                                                                 The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NF-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nuclear factor kappa B; NF-kappaB; inflammation; autoimmune disease; cancer; infectious disease; bone disease; AIDS; neurodegenerative disease; ischaemic disorder; Antiinflammatory; Immunomodulator; Cytostatic; Antimicrobial; Osteopathic; Anti-HIV; Neuroprotective; Nootropic; Cardiant; Gene therapy; human; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                        New purified protein that activates nuclear factor kappa B (NF-kappaB), useful for treating inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases or ischemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2003-505282/47.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NF-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New purified protein that activates nuclear factor kappa B (NF-kappaB), useful for treating inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases or ischemic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2019
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1959
```

```
nucleotide sequence selected from any of 948 sequences (ABZ11119-CC ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for codentifying expressed genes or for physical mapping of human genome. The cc encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight commarkers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-cc proliferative disorders (cancer), neurodegenerative diseases (Parkinson's cc arthrests, lupus) genetic disorders, myeloid or lymphoid disorders, cc platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part cc directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
```

Sequence 2084 BP; 519 A; 571 C; 581 G; 413 T; 0 U; 0 Other; DB 6; Length 2084;

                                                                                                                                                                                                               The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arginine-rich protein cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant activity of the arginine-rich polypeptides, such as cancer and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ss; gene; human; arginine-rich protein; cancer; genetic disorder.

                                                                                                                                                                                                                                                                    뮍
                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-CC ABZ12066) or their mature protein coding portion, active domain coding crotein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight commarkers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-crosis, screening and diagnostic assays and for treating cell-crosis, and ferative diseases (Parkinson's CC diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, completes, liver completes, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part completes are sequences at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                Query Match

The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arginine-rich protein cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NF-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified protein that activates nuclear factor kappa B (NF-kappaB), useful for treating inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases or ischemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2003-505282/47.
